A CORPUS OF ANCIENT EGYPTIAN EMBALMING PLATES

Francisco Luis Borrego Gallardo
(Universidad Autónoma de Madrid)

ABSTRACT
The ‘embalming plate’ is a type of artefact that is mentioned quite frequently in the literature on ancient Egyptian mortuary practices. However, it has not been well studied so far. This paper is a preliminary corpus that can serve as a basis for further studies of this kind of objects, as an open list that can be expanded in the future. This corpus is divided into four lists: A) pieces removed from the mummies with which they were associated; B) doubtful examples; C) items discovered by the x- ray ing or scanning of mummies; D) embalming plates currently in two display cases in Room 22 at the Egyptian Museum in Cairo.

KEYWORDS
Ancient Egyptian mortuary practices, mummification, embalming plate, amulets, wedjat-eye.

RESUMEN
Las placas de evisceración constituyen un artefacto mencionado recurrentemente en la literatura sobre las prácticas funerarias del antiguo Egipto que, sin embargo, no ha sido estudiado en detalle. Este artículo se presenta como un sencillo corpus preliminar que sirva de base para ulteriores estudios de esta clase de objetos, como una lista abierta que puede ser ampliada en el futuro. El corpus está dividido en cuatro listas: A) piezas retiradas de las momias con las que estuvieron asociadas; B) ejemplares dudosos; C) ítems descubiertos con radiografía o escaneo de momias; D) placas de evisceración actualmente en dos vitrinas de la sala 22 del Museo Egipcio de El Cairo.

PALABRAS CLAVE
Prácticas funerarias del Egipto antiguo, momificación, placa de evisceración, amuletos, ojo udyat.

The so-called ‘embalming plate’, ‘embalmer’s plaque’ or ‘incision-plate’ is a type of artefact documented between the New Kingdom and the Late Period that is mentioned quite frequently in the literature on ancient Egyptian mortuary practices1. However, it has not been well studied so far. Thus, detailed descriptions, complete publications and overall analyses on them are quite rare.

Besides some royal examples of the Third Intermediate Period, most of the known examples of embalming plates are those found with the mummies of the priests and priestesses of Amun of the Twenty-first and Twenty-second Dynasties who were buried in the collective tomb of Bab el-Gasus (Deir el-Bahari, Western Thebes)2. However, this corpus is also the worst known and published. The descriptions of the G. Daressy, the Egyptologist in charge of reporting the objects found with the mummies, very meagre and without figures or photographs3, are the only first-hand source for their understanding. Some of these pieces are apparently on display at the Egyptian Museum in Cairo (Room

2 Sousa 2018, with earlier references.
3 Daressy 1902; 1903; 1908.
22). During a visit to this museum in August 2019, I had the opportunity to take several photographs of the two display cases where this type of artefact is exhibited. Next to each piece a number was written on a black card, which is most likely the number given to them in the Special Register (SR 8715-8738 and 8758-8771)\(^4\). In this work, I have decided to include a brief description of these pieces. Although there may be redundancies concerning the items coming from Bab el-Gasus, I think that this is a minor problem because of their informative interest.

This corpus is composed of several lists, arranged internally in chronological order. A first list, in Arabic numerals, shows the pieces that have been removed from the mummies with which they were associated, and which are mostly housed in museum institutions. A second list, arranged in Latin letters, presents the doubtful examples. Thirdly, the items ordered by Roman numerals are those discovered by the x-raying or scanning of mummies. Finally, a list of the pieces currently on display in two display cases in Room 22 at the Egyptian Museum in Cairo has been included, ordered according to their corresponding SR numbers. At the end is an index of inventory numbers with the identification given in the corpus.

In the file of each of the pieces, the ‘Inventory number’ states, if known or published, the registration number(s) that the piece has at the museum where it is kept. The ‘Other numbers’ section includes other numbers of the embalming plates that are relevant to their identification or that of their owner. The most important is the ‘A-List’ that G. Daressy prepared for the objects and individuals buried at Bab el-Gasus.

‘Owner’ only states the name, without mentioning his/her parentage or titles. The names of kings and royal personae have been recorded in transcription and those of private persons in transliteration. ‘Material’ indicates the medium in which the piece was made. ‘Main motif’ presents, if known, the most relevant logoiconic content of the piece (wedjat-eye, Sons of Horus, text(s), etc.). ‘Decoration’ records the materials and techniques used to create the appearance, texts, and images of the piece. ‘Observations’ include, if appropriate, some particular or interesting details. The ‘References’ are limited to the minimum and most relevant.

This work has no other aim than to be a simple preliminary corpus that can serve as a basis for further studies of this kind of artefacts. It is an open list that can be expanded, enriched, and corrected in the future with access to sources that have not yet consulted, the publication of new studies, museum collections and new findings\(^5\).

\(^5\) The genesis of this corpus of artefacts is in the study of a plate of this kind that was kindly entrusted by the director of the Proyecto Djehuty, José M. Galán Allué (CSIC), to Jesús Herrerín López (Dpto. de Biología, UAM) and myself. I would like to thank both for their generosity and observations, which I also extend to Salima Ikram (AUC) for her help in the initial stages of this research.

**D. Plaques with Cairo Museum SR number**

In the following list, the name of the owner, the provenance and the date are not recorded. It must be noted that it is highly probable that some plates from the mummies of the priests and priestesses buried in Bab el-Gasus (and classified under a number of the ‘list A’ de G. Daressy)\(^6\), maybe with a JE and TR numbers, are now on view among those located in two vitrines of the room 22 in the upper floor of the Egyptian Museum of Cairo.
